ANALYTICAL TOOLS

1. What Problem Does the Platform Solve?

In Bulgaria, public records are fragmented across more than 15 separate, isolated, and cumbersome government registries (CAIS EOP, PPO, UMIS, Commercial Register, CAC/National Audit Office, CEC, ISJC, NHIF, SFA). Investigative journalists and civil watchdogs routinely spend days manually assembling and cross-referencing facts. **Naiasno unifies these disparate datasets into a cohesive, fully auditable analytical system.** All data concerning public figures, corporate entities, procurement contracts, agricultural subsidies, election results, and media coverage are interconnected. This empowers journalists and analysts to expose covert conflicts of interest, procurement corruption risks, and narrative manipulation in seconds.

1. Finance & Power

Public procurement contracts, EU funds, NGO grants, farm subsidies, and state budget outlays cross-checked against the Commercial Register.

2. Public Figures & Networks

Asset declarations, affiliated entities, corporate ownership, family ties, Communist-era State Security (DS) files, and international sanctions.

3. Media Radar (News)

The Bulgarian implementation of the Ground News model: cross-spectrum editorial comparison, origin-speed tracking, and blind-spot detection.

Scope of Integrated Primary Public Registries in Naiasno

CAIS EOP & PPO

409,000+ contracts and 230,000+ tender notices from 2011 to date (including legacy archives from 2000).

UMIS 2020, Interreg & SFA

€45B+ in EU funds, €405M+ across cross-border Interreg projects (1,970 projects), and €1.6B in SFA farm subsidies.

CAC, Commercial Reg. & NGOs

56,000+ public figures and 30,000+ NGOs with declarations of real estate, bank accounts, board seats, and corporate ties.

CEC (2005–2026)

Exhaustive precinct-level archive covering 10+ national election cycles with scanned protocols and machine flash-drive dumps.

2. Public Procurement & Corruption Risk Index

The public procurement module monitors more than 409,000 government contracts valued in the billions of euros. The system computes a **Contract Risk Index (CRI)** for every tender, synthesizing 13 objective corruption risk indicators into an automated A–F rating.

- 1 Risk Grade (A–F): Evaluates the likelihood of rigged bidding (grades D, E, and F signal acute corruption risk).
- 2 Single-Bidder Tenders: Flags tenders awarded without genuine competition, where only a single offer was submitted.
- 3 Annex Cost Escalation: Tracks contracts secured with artificially low bids that were subsequently inflated via amendments.
- 4 Buyer & Supplier Networks: Maps financial flows—identifying which contracting authorities systematically steer funds to favored vendors.

Top Contractors and Public Resource Concentration

What Do Investigative Journalists Gain?

- Instant vetting of favored corporate contractors across any ministry, municipality, or state hospital.
- Unmasking consortiums and hidden subcontracting tiers in major national infrastructure developments.
- Unbroken 15-year archive: Includes reconstructed 2018 records from legacy PPO that are missing in official open data.

Core Red Flags for Procurement Corruption Risk

Contracting Authority Concentration

When over 50% of the total procurement volume of a public body is captured by the top 3 firms over a multi-year period.

Artificially Compressed Deadlines

Multi-million-euro tenders published with statutory minimum submission windows, tailoring advantages to predetermined bidders.

Hidden Escalation via Amendments

Contracts subjected to repetitive financial annexes exceeding initial agreed pricing by 20% to 50%.

🔍 Risk Index Methodology (Contract Risk Index & Risk Grade A–F)

Methodology v1.0 • 13 Objective Indicators

The CRI = (triggered flags / testable indicators) × 100 metric does not rely on subjective impressions; it evaluates every contract against the European Open Contracting Partnership framework and Arts. 116 / 79 of the Public Procurement Act: **1. Deficit of Competition:** Single-bidder procedure or structural absence of competing bids in open tenders. **2. Buyer Concentration (≥30%):** A single contractor captures over 30% of an authority's cumulative procurement expenditure. **3. Politically Exposed Persons (PEP/MP):** Beneficial owners or managing directors are active MPs, ministers, mayors, or senior officials. **4. Annex Cost Growth (≥50%):** Cumulative increase in contract value exceeding statutory ceilings. **5. Newly Formed Entity (<12 mo):** Contract awarded to a company registered less than 12 months prior to the tender notice. **6. Activity Mismatch:** Discrepancy between the contractor's registered economic code (NACE) and procurement subject (CPV). **7. Debarment & Appeals:** Listed on the PPA debarred supplier register or upheld bid-rigging complaint at the CPC.

3. Major Infrastructure Projects (Project Dossiers)

Naiasno builds comprehensive investigative dossiers for Bulgaria's largest state infrastructure developments. The system consolidates all tenders, non-competitive in-house awards, cost annexes, and verified payments for each project, benchmarking their unit cost against European engineering baselines (€/km).

- 1
- Flagship Dossiers:** Hemus Motorway, Sofia Metro Expansion, Struma Motorway (Kresna Gorge), Ruse–Veliko Tarnovo Motorway, Voting Machine Hardware.
- 2
- Non-Competitive In-House Awards:** Tracks how billions were awarded without tender to state-owned "Avtomagistrali" EAD and funneled to private sub-entities via advances.
- 3
- Actual Cost per Kilometer (€/km):** Automated calculation of realized expenditures per kilometer compared against initial budget allocations and adjacent highway lots.

Project Anatomy: Hemus Motorway (/procurement/project/hemus)

Why Are Project Dossiers Indispensable for Media?

- Interactive timeline of annexes:** Step-by-step audit of every contractual revision in price and project completion milestones.
- Weeks of research saved:** Consolidates hundreds of fragmented tender notices and procurement lots into a single verified screen.
- Verified primary sources:** Every entry links directly to the original underlying contract and ministry order in the state register.

Comparative Register of Key National Infrastructure Dossiers

PROJECT	ESTIMATED VALUE	PROCUREMENT METHOD	PRIMARY RISK FACTORS
Hemus Motorway (Lots 1–9)	€2.1B (€485M+ contracted)	In-house award (non-competitive)	Unbacked advance payments to undisclosed subcontractors; construction without building permits.
Sofia Metro (Lines 1, 2, 3)	~€1.8B total funding	Open competitive procedures by lot	High contract concentration among consortiums formed by a few dominant construction holdings.
Ruse – Veliko Tarnovo Motorway	~€2.3B projected cost	Open competitive tenders	Record unit cost reaching ~€16M/km on complex subsections; subsequent price escalation via annexes.

4. Strategic Public Sectors & Public Spending Distribution

SECTORS /sectors

ROADS /sector/roads

HEALTHCARE /sector/healthcare

IT /sector/it

A panoramic view of public spending across strategic national industries. Each sector synthesizes public procurement, EU operational programmes, state subsidies, and personnel budgets to display the true structural distribution of taxpayer funds.

- Sector Catalogue:** Road Infrastructure, Healthcare, Energy & Utilities, Information Technology, Culture, Judiciary, National Security.
- Dominant Beneficiaries:** Identifies companies capturing the lion's share of funding and maps their interwoven commercial ties.
- Multi-Year Expenditure Trends:** Tracks spending contractions or sharp spikes that correlate with ministerial leadership changes.

Road Infrastructure Sector (/sector/roads)

What Does Sectoral Intelligence Reveal?

- Unified financial picture:** Aggregates total industry expenditures into a cohesive view, eliminating the fragmentation of isolated bids.
- Market concentration:** Pinpoints dominant industry players and measures the proportion of state funds they effectively control.
- Institutional register:** Detailed profiles of individual hospitals, regional road directorates, or water utilities with their respective budgets.

The Three Largest Pillars of Bulgarian Public Spending

Infrastructure & Transport
Road Infrastructure Agency (€4.3B contracted), Bulgarian Water Holding (€1.2B), NRIC Railway (€2.1B), and state energy enterprises (Kozloduy NPP, Maritsa TPP, NEK, ESO).

Social Systems & Healthcare
NHIF (€3.8B hospital care, €1.5B pharmaceuticals), NSSI (€11.1B pensions and social security), and national school education budgets (€2.4B).

Security & Justice
Judicial branch budget (€600M+), Ministry of Defence (€1.8B), Ministry of Interior (MVR), and independent national regulators (CPC, EWRC, CCP).

--------------------------------	--	----------------------

Мост между групи

- **Politician ↔ Business Partners ↔ State**
Contracts: Tracks public treasury funds flowing to companies linked to decision-makers.
- **Magistrates with Commercial Holdings:**
Judges and prosecutors maintaining active corporate stakes or undeclared properties.
- **Political Campaign Donors:** Individuals who financed election campaigns whose businesses subsequently secured multi-million state contracts.

The diagram consists of four light blue rounded rectangular boxes arranged horizontally. Each box contains a bold title and a descriptive sentence.

- Commercial Partnerships**
Individuals sharing co-ownership or executive management in active and restructured legal entities.
- Family Relationships**
Spouses and direct relatives with declared assets, financial holdings, and income before CAC or ISJC.
- Political Affiliations**
Enterprises owned by party candidates and donors winning tenders issued by fellow party members in office.
- Special Watchlists**
Automated alerts for US Magnitsky / EU sanctions and verified Communist-era State Security (DS) affiliations.

6. Parliamentary Monitoring, Roll-Call Voting & Hidden Party Convergence

PARLIAMENT /parliamentSIMILARITY /similarityCOHESION /cohesionATTENDANCE /attendance

The platform archives complete **individual roll-call voting records in the National Assembly** — every vote cast by every Member of Parliament on every legislative item and procedural motion. Through statistical modeling, the system computes the exact voting similarity between MPs and parties, exposing unannounced voting pacts and floating majorities.

- 1
- Comprehensive Roll-Call Archive:** Every plenary session, draft bill, section-by-section vote, and revoke broken down by MP and parliamentary group.
- 2
- Voting Similarity Matrix:** Exact mathematical agreement rate (0–100%) between any two MPs or parliamentary factions across thousands of votes.
- 3
- Floating Majority Detection:** Unmasks instances where opposing party caucuses vote in lockstep on regulatory appointments, concessions, or budgets.
- 4
- Party Discipline & Quorum Absences:** Identifies MPs who consistently dissent from party lines or systematically skip crucial legislative quorums.

MP Bilateral Comparison & Covert Party Convergence

What Do the Voting Records Expose for Journalists?

- Real vs. Rhetorical Coalitions:** Demonstrates when political rivals vote synchronously on impactful, low-visibility statutory provisions.
- Regulatory Body Quotas:** Uncovers joint majority votes on leadership appointments across the BNB, FSC, CPC, National Audit Office, and Constitutional Court.
- Thematic Filters:** Allows filtering roll calls strictly by policy domains — energy, judicial reform, fiscal policy, or national defense.

Key Analytical Metrics for Parliamentary Activity

Party Cohesion (Discipline)
Percentage of votes where an MP voted alongside the majority of their respective parliamentary caucus.

Head-to-Head MP Comparisons
Direct pairwise comparison: tally of identical votes, opposing votes, and abstentions or absences.

Plenary Attendance
Verified physical presence in plenary sessions by day and hour, exposing ghost registrations designed solely to ensure quorum.

7. Government Performance Indicators & Historical Retrospectives

A complete macroeconomic and fiscal overview of Bulgaria from 1990 to the present day, organized by the mandates of elected and caretaker cabinets. The platform tests political rhetoric against official historical statistics covering GDP growth, sovereign debt, deficits, inflation, capital investment, and governance indicators.

- 1 Cabinet Chronology (1990–2026): Duration of governance, reasons for mandate termination, coalition agreements, and parliamentary majority margins.
- 2 Comparative Assessment (/indicators/compare): Side-by-side benchmark of macroeconomic performance across administrations (Borissov, Petkov, Denkov, Glavchev, etc.).
- 3 Fiscal Discipline: Budget execution fidelity, debt issuance vs. maturities, Maastricht deficit compliance, and the fiscal reserve buffer.

Indicators Hub: Economy, Public Finance, Governance (/indicators)

- Fact-Checking Political Narratives:
- Objective arbiter: Instant empirical verification of claims such as "we left the treasury overflowing" or "the national debt doubled under their tenure".

• Regional EU benchmarking: Contrasts Bulgaria's economic pace with regional peers (Romania, Greece) and EU-wide averages.

• International Governance Rankings: Historical trajectories of rule of law, corruption perception, and press freedom indices across cabinet terms.

Comparative Snapshot of Key Macroeconomic Indicators by Cabinet

CABINET / TERM	AVG GDP GROWTH	AVG INFLATION	DEBT / GDP (END)	BUDGET BALANCE
Borissov III (2017–2021)	+3.1%	+2.4%	24.5%	Surplus / -3.0% (pandemic)
Petkov (2021–2022)	+3.9%	+15.3% (energy shock)	22.9%	-2.9% deficit
Denkov (2023–2024)	+1.8%	+4.7%	23.1%	-2.2% (Eurozone target)
Glavchev / Caretaker (2024–2026)	+2.2%	+2.8%	24.1%	-2.8% target deficit

8. State Budget, Fiscal Analysis & Interactive Tax Simulator

Comprehensive analysis of the Consolidated Fiscal Programme (CFP) and general government accounts. An interactive simulation engine enables users to model changes to tax and social contribution policies, calculating their precise impact on treasury revenues, budget deficits, and sovereign debt.

- 1
- Consolidated Public Accounts:** Tax revenues, operational expenditures, transfers to Social Security and NHIF, capital budgets, and deficits under ESA 2010 and cash CFP.
- 2
- Simulation Tax Levers:** Standard VAT rate, differentiated VAT brackets, flat vs. progressive income tax schedules, and corporate tax rates.
- 3
- Social Contribution Burdens:** Simulating fiscal yields from adjustments to the maximum insurable income cap and pension / health contribution rates.

Interactive Tax Policy Simulator (/budget/simulator)

- A Pioneering Modeling Tool for Media & Think Tanks:
- Stress-testing electoral pledges:** Reporters can immediately ascertain whether campaign tax-cut promises create fiscal shortfalls in the state budget.
 - Benchmarking European tax structures:** One-click application of German, Romanian, or Estonian fiscal and tax structures onto the Bulgarian economy.
 - Sovereign debt forecasting:** Dynamic projection of how any fiscal adjustment alters the national debt-to-GDP trajectory over a 5-year horizon.

Core Budgetary Components and Macroeconomic Impacts

Tax Revenues (~80% of CFP)
Indirect taxation (VAT and excises) generates over half of state revenue. The simulator calculates price elasticity and consumer response upon rate alterations.

Social Expenditures (NSSI & NHIF)
Pensions and public healthcare represent the single largest expenditure items. The model clarifies the exact share of pensions financed by general budget subsidies.

Capital Investment Programme
Real-time auditing of realized public capital expenditures compared to authorizations in the State Budget Act (Annex No. 3).

9. Consumer Goods, Retail Prices & 101-Product Basket

The only independent monitoring framework tracking retail consumer pricing across more than 100,000 product SKUs from major supermarket chains. The platform monitors price dynamics following euro adoption and exposes discrepancies between retail chains and municipalities.

- 1 101 Essential Goods Basket (/prices): Daily monitoring of staples including bread, milk, cheese, meat, eggs, sunflower oil, and staple produce.
- 2 Supermarket Chain Benchmark (/consumption/chains): Identifies which retailer offers the best value for an identical standardized basket and highlights inflated markups.
- 3 Geographic Price Map (/prices/map): Cross-regional price comparison for identical SKUs across 265 municipalities and 28 administrative districts nationwide.

Consumer Basket: Price Trends and Inter-City Variations

- Practical Value for Journalists and Everyday Consumers:
- Shrinkflation detection: Automated tracking of unit prices (€/kg and €/L) to expose manufacturer package downsizing at unchanged shelf prices.

Fuel & Utility Tariffs: Live monitoring of retail fuel station prices (gasoline, diesel, LPG) alongside regulator-approved electricity and natural gas rates.

Turnkey weekly consumer indices: High-engagement journalistic features dissecting real-world cost-of-living impacts on household budgets.

Real-Time Price Monitoring Methodology

101 Essential Products

A standardized staple grocery basket audited daily across more than 1,400 physical retail outlets nationwide.

Chain-to-Chain Comparison

Rigorous, objective pricing comparison across major supermarket brands (Lidl, Kaufland, Billa, Fantastico) for identical grade and quantity.

Fuel & Regulated Utilities

Integration with live fuel pump price feeds and utility rate decisions issued by the Energy and Water Regulatory Commission (EWRC).

10. Public Finance: Agricultural Subsidies, EU Funds & Interreg

Unprecedented transparency into the flow of domestic and European funding in Bulgaria. The platform uncovers the ultimate beneficial recipients of billions in Common Agricultural Policy (CAP) subsidies (SFA), EU operational programmes (UMIS 2020), and cross-border Interreg partnerships (Jems / keep.eu).

- 1 State Fund Agriculture: Direct area payments, livestock headage subsidies, and rural investment tranches under the EU Common Agricultural Policy (CAP).
- 2 UMIS 2020: All EU funding contracts awarded since 2007, paired with verified disbursed tranches.
- 3 Conglomerate Concentration: Automated consolidation of affiliated corporate entities into unified agricultural and business holdings.
- 4 Per-Capita Funding Inflows: Comparative municipal ranking revealing which local governments attract the highest EU allocations relative to their population.

State Fund Agriculture & European Programmes (/subsidies)

What Does the Funding Intelligence Engine Reveal?

Contracted vs. Disbursed Discrepancies:

Audits the lag between contracted project amounts and certified cash payouts.

Integrated Interreg Database:

Incorporates the European Jems repository missing from UMIS—€405M+ across 1,970 projects in border areas.

Fair Municipal Rankings:

Recalibrates per-capita ranking across 213 municipalities by factoring in cross-border Interreg capital.

Open Calls (/opencalls):

Current registry of active EU grant funding schemes accepting project applications today.

The Three Pillars of European and Farm Subsidies in Bulgaria

State Fund Agriculture (CAP)

€1.6B annually. Nearly half of historical records lacked company IDs (EIK); the top 100 recipients capture 14.8% of funds. The platform resolves ownership networks.

UMIS 2020 (EU Programmes)

€45.1B contracted and €19.3B paid out since 2007 (Transport €3.8B, Environment €3.2B, Regional Development €3.1B, Human Resources €2.8B).

Interreg Registry (Jems / keep.eu)

€405M+ allocated to Bulgaria across 1,970 cross-border projects (1,509 BG partners). Omitted from UMIS, its inclusion shifts rankings for 213 border municipalities.

11. Non-Profit Sector (NGOs / CSOs): Funding, Donors & Politician Ties

NGO CATALOG

/procurement/ngos

NGO PROFILE

/company/:eik

DONORS

ABF · NED · EU FTS

SUBSIDIES

State Budget · UMIS

In Bulgaria, the non-profit sector encompasses over **30,400 active associations, foundations, and community culture centres (chitalishta)**. While state registries operate as passive directories without analytics, **Naiasno transforms the non-profit registry into an actionable intelligence system tracking public interest indicators**. The platform cross-references non-profit entities against public procurement contracts (€21.5M), EU operational programmes via UMIS (€2.2B+), international donor grants (€1.6B), state budget allocations, and the directorships of active politicians and magistrates.

- 1 **Public Interest Signals:** 2,739 non-profits exhibit active signals — EU funding (2,297), foreign donor grants (327), public procurement wins (192), serving magistrates on boards (62), and active politicians in governance (50).
- 2 **Neutrality in Foreign Funding:** Built on the EU Transparency Register and ProPublica models: exact figures in €/€ without stigmatizing labels ("foreign agents"), accompanied by specific project titles and operational objectives.
- 3 **Public Procurement & Single-Bid Awards:** 192 non-profits have won public tenders totaling over €21.5M, with 75 entities securing awards under single-bidder conditions—a clear indicator of restricted market competition.
- 4 **Politicians & Magistrates on Boards:** 50 non-profits feature active MPs and mayors in leadership (e.g. former PM N. Denkov on the board of "Teach for Bulgaria" with \$21M in funding; mayors on NAMRB managing €25M) and 62 feature magistrates (incl. Supreme Administrative Court President G. Cholakov in the Bulgarian Union of Jurists with €838K).

Concrete Examples: Media Funding and Political Figures on Non-Profit Boards

ORGANIZATION & ID (EIK)	BOARD MEMBERS / AFFILIATED MEDIA	FUNDING SOURCE	CAPTURED FUNDING & OBJECTIVES IN NAIASNO
Foundation "Info Space" EIK 130629854 (Foundation)	Publisher of Mediapool.bg Stoyana Georgieva (Executive Director)	America for Bulgaria Foundation (ABF), EU, NED	\$2.61M total (\$1.91M from ABF across 2009–2024 + \$700K+ EU FTS & foreign donors) for independent journalism and civic oversight.
Association "Free Speech Forum" EIK 177028169 (Association)	Publisher of Zaistinata.com Regional Investigations	America for Bulgaria Foundation (ABF)	\$1.79M total (\$1.22M in 2022 and \$569K in 2017) for investigative regional journalism outside Sofia.
AEJ – Bulgaria / ACF EIK 176007906 / 177101397	Association of European Journalists & Anti-Corruption Fund	ABF, EU Programmes (EU FTS), Donors	\$3.3M+ for AEJ (press freedom, ethical standards) and \$2.12M+ for ACF (investigative series, anti-corruption dossiers).
Foundation "Teach for Bulgaria" EIK 175935973 (Foundation)	Acad. Nikolay Denkov PM 2023–24, MP PP-DB (Board Member)	America for Bulgaria Foundation (ABF)	\$21M+ (€19.55M) for educational programmes, school leadership development, and nationwide teacher qualification.
NAMRB (Association of Municipalities) EIK 121399226 (Association)	G. Maradzhiev, H. Azis, V. Dimitrov, S. Vladimirov Mayors from GERB, DPS, BSP (Board Members)	UMIS 2020 (EU programmes), EU Direct Grants	€25.3M+ total (€15.7M contracted via UMIS + €9.6M in direct EU & donor projects) for municipal modernization and digitalization.
Association "IDEA" & LAG Elhovo EIK 175790260 / 175963901	Ilina Mutafchieva (MP PP-DB, Board); Maria Petrova (MP ITN, LAG Leader)	International Donors, RDP / UMIS 2020	€371K+ for "IDEA" (€285K in international youth projects); €773K+ for LAG "Elhovo - Bolyarovo" under the Rural Development Programme.

*** Commercial Publishers vs. Non-Profits:** Direct commercial grants to for-profit publishing houses (e.g. *Economedia AD* – publisher of *Capital* and *Dnevnik*, recipient of \$8.4M+ from ABF between 2009 and 2024) are segregated in the Commercial Register from non-profit entities according to their corporate legal status.

**** OpenSanctions Standard for Politically Exposed Persons (PEPs):** The presence of a politician or magistrate on an NGO board serves as an objective indicator of institutional reach and potential conflict of interest (notably in public procurement and grant allocations), rather than an inherent impropriety.

Naiasno's Three Core Principles in Non-Profit Intelligence

Financial Transparency, Not Ideology
The platform presents audited facts: exact donor identities, precise sums in €/€, and granular project deliverables. Rigorous transparency without speculation or conspiracy framing.

Scrutiny of Public Procurement
192 non-profits holding €21.5M in public contracts. When an association secures non-competitive tenders (single-bid) from a state body linked to a board member, the system instantly flags the risk.

Cross-Registry Verification
All board members of non-profit entities are automatically cross-checked against the Commercial Register, active magistrates under Art. 19 Judicial System Act (ISJC), CAC declarations, and candidate lists.

12. Healthcare (NHIF), Drug Price Arbitrage & Court Workloads

Naiasno scrutinizes public expenditure across two critical state sectors — **healthcare (€4B+ / 8B+ BGN NHIF budget)** and the **judiciary (€550M+ / 1.1B+ BGN SJC budget)**. The system exposes unjustified pricing disparities in hospital procurement and deep caseload imbalances across the court system.

- 1

Oncology Drug Price Arbitrage: For identical pharmaceutical molecules (e.g. *Bevacizumab*), certain private hospitals are reimbursed by NHIF at rates up to 2.4x higher than state-run facilities.
- 2

Facility-by-Facility Breakdown: Direct side-by-side comparison of unit reimbursement prices and treatment volumes across every hospital in Bulgaria.
- 3

Millions in Public Overpayments: Algorithmic calculation of reimbursement premiums paid above European reference baselines, funded directly by citizen health contributions.
- 4

Inpatient Healthcare Volumes: Real-time tracking of clinical pathways and funding disbursements across state, municipal, and private hospitals.

Judicial Caseload Disproportions & Court Map Reform

- What Does Judicial Intelligence Reveal?

Interactive map of 178 courts:

Comprehensive workload analytics covering over 544,000 cases handled annually across Bulgaria.

Severe staffing disparities:

Judges in the Sofia District and City Courts carry several times the caseload of rural district courts with identical staffing allocations.

Magistrate wealth registries:

Integrated with ISJC asset declarations, tracking real estate, bank accounts, and corporate equity held by judges and prosecutors.

Key Investigative Angles in Healthcare and Justice

Public vs. Private Hospitals

Comparative analysis of patient volumes, NHIF funding receipts, and medication unit pricing across public and private healthcare providers.

Judicial Efficiency & Speed

Proportion of cases resolved within 3 months, alongside the appellate affirmance vs. reversal rate of rulings on appeal.

Judicial Branch Budgets

Granular allocation of the €550M+ annual judicial budget across individual courts, prosecutor offices, and the Supreme Judicial Council.

13. Local Governance & "My Area": Integrated Municipal Profiles

MY AREA

/my-area

MUNICIPALITY /governance/:id

EXAMPLE /governance/VTR04

LOCALITIES

265 municipalities · 5,257 settlements

"My Area" translates fragmented national databases into a personalized civic intelligence dashboard for every settlement in Bulgaria. Citizens gain instant transparency into who governs them, the mayor's declared salary, how municipal councillors vote, where local property taxes are spent, and stalled municipal infrastructure projects in their immediate neighborhood.

- 1
- All 265 Municipalities & 5,257 Settlements: Instant search by city or village name, or one-click geolocated detection of the nearest locality with zero tracking of personal data.
- 2
- Complete Administrative Hierarchy: For small villages, the dashboard displays both the local deputy mayor and the governing municipal center, its municipal budget, and council.
- 3
- Automated Synthesis of 15+ Registries: Public procurement contracts, EU funds, local leaders' declared assets, school test scores (Matura), retail prices, and air quality index.
- 4
- Electoral Integration: Direct link to municipal election outcomes, voter turnout rates, and polling stations flagged for controlled voting within the municipality.

Concrete Case: What a Resident of Veliko Tarnovo Municipality Sees (/governance/VTR04)

- Four Key Dimensions for Local Citizens:
- Mayor's Salary and Assets: €62,051 annual employment income declared by Mayor Daniel Panov (#235 of 252 municipalities by salary per resident), with direct link to CAC.

• Municipal Council & Roll-Call Voting: Party composition across 36 councillors (10 parties/coalitions) and archive of roll-call votes on municipal property transactions.

• Personalized Local Tax Receipt: Central government redistributes €795 per resident annually (€68.9M total). The calculator reveals the exact breakdown of personal income taxes funding schools, sanitation, and safety.

• Capital Investment & Stalled Projects: €47.1M invested across 382 projects and an audit radar tracking 13 stalled MRRB projects (e.g. Nikyup water supply project: €9.6M allocation with 0% absorption).

Why "My Area" Transforms Citizen Engagement with Local Government

Personalized Tax Breakdown

Links national income tax directly to municipal services, showing how many euros of a resident's tax bill fund local schools, sanitation, roads, and policing.

Unmasking Council Coalitions

Exposes covert voting alignments within Municipal Councils by tracking individual roll-call votes on contested property disposals and development tenders.

Toolkit for Regional Journalists

Ready-to-use investigative dossiers: procurement concentration with local contractors, conflicts of interest among officials, and delayed public works.

14. Naiasno News — The Bulgarian Media Radar

The Bulgarian counterpart to **Ground News**: automated, continuous monitoring of nearly 60 Bulgarian news outlets. The platform clusters coverage by breaking events, evaluates editorial slant across the political spectrum, pinpoints who broke the story first, and illuminates media coverage blind spots.

- 1**Event Clustering:** Breaking domestic news stories organized thematically by event cluster and public impact.
- 2**Political Spectrum:** Algorithmic assessment of editorial framing — Left, Center, or Right political leaning.
- 3**Geopolitical Axis:** Dedicated classification evaluating Pro-Russian, Neutral, or Euro-Atlantic editorial stance.
- 4**Editorial Blind Spots:** Identifies which outlets deliberately omit events that compromise their corporate or political patrons.

Story Deep-Dive: Comparative Perspectives & Information Velocity

Unique Capabilities for Journalists:

- Original reporting speed:** Precise timeline revealing which media organization broke the story first vs. outlets that merely republished wires.
- Headline comparison:** How an identical development is framed across partisan, critical, or sensationalist publications.
- Consensus vs. Spin:** Distinguishes undisputed factual claims from partisan narrative spinning.

Continuously Monitored Media Ecosystem (~59 Outlets)

National Broadcasters & Press
bTV, Nova TV, BNT, BNR, Dnevnik, Mediapool, ClubZ, 24 Chasa, Trud, Blitz, Dir.bg, Offnews, Sega, Radio Free Europe / RFE Bulgaria.

Regional Press Network
Flagman (Burgas), Maritsa (Plovdiv), Cherno More (Varna), Pod Tepeto, regional BNR correspondents, and municipal news outlets.

Geopolitical Radar
Automated detection of coordinated Kremlin talking points and synchronized clickbait republishing networks.

15. Article Deep-Dive, Narrative Detection & Developing Stories

ARTICLE ANALYSIS /article/:id

CASES /cases

PETROHAN AFFAIR /case/petrohan

A distinct methodology: While international services like Ground News and AISides assign a static rating to an entire media outlet, Naiasno analyzes the exact text of every individual article, extracting sentence-level textual evidence for every assessment.

- 1 **Textual Evidence:** The engine quotes exact sentences substantiating political or geopolitical bias classifications.
- 2 **Author Stance vs. Direct Quotes:** Disentangles an author's editorial bias from quotes attributed to primary sources.
- 3 **AI-Generated Content Detection:** Evaluates whether an article was produced via large language models or automated translation engines.
- 4 **Political Figure Sentiment:** Measures sentiment polarity (favorable, neutral, critical) directed toward political leaders and parties.

Major Investigations and Developing Scandals (/cases)

What Each Investigative Case File Contains:

• **Chronological timeline:** Comprehensive tracking from day one, preserving critical historical context.

• **Contested claims & opposing responses:** Structured overview of conflicting accusations and replies from affected parties.

• **Procurement & Corporate Links:** Direct cross-references to state procurement contracts and corporate registries in the core database.

Why Developing Case Files Are Invaluable to Newsrooms

Permanent Institutional Memory
Bulgarian political scandals are frequently forgotten within two weeks. Case dossiers maintain every turn, statement, and official document for years.

Multi-Source Verification
Every assertion reconciles official institutional press statements with counter-statements by legal counsel and scrutinized figures.

Tracing Capital and Contracts
Whenever a scandal implicates private firms or officials, readers can inspect their public procurement awards and business ties in one click.

16. Electoral Integrity, Controlled Voting & Polling Agency Accuracy

Naiasno hosts **Bulgaria's most comprehensive electoral integrity archive (2005–2026)** down to each individual polling precinct (~12,000 stations), coupled with forensic statistical methods to detect voting anomalies and a dedicated pollster accuracy tracker.

- 1 **Composite Electoral Risk Index:** Built on 5 independent indicators (precinct turnout deviations, machine vs. paper discrepancies, missing USB logs, unnatural vote concentration, tally corrections).
- 2 **High-Risk Precinct Anomalies:** Pinpoints sudden swing voting in isolated rural or segregated precincts (e.g. swinging from 95% for one party to another).
- 3 **Machine Voting Integrity:** Automated reconciliation between machine-recorded vote logs on USB drives and official tally sheets (protocols).

Polling Agency Audit: Accuracy, Historical Bias & Skew (/polls)

- Advanced Electoral Forensics:**
- Pollster Accuracy Rankings:** Historical scorecards evaluating agency forecasting precision (Alpha Research, Trend, Market Links, Gallup, Sova Harris, Myara).
 - Partisan House Bias:** Identifies agencies that systematically overestimate or underestimate particular political forces prior to elections.
 - Benford's Law (Mebane 2BL Test):** Forensic analysis of second digits in precinct protocols using Walter Mebane's methodology to detect vote manufacturing.

Statistical Methodologies for Detecting Electoral Anomalies

Benford's Law (Mebane Test)

Tests whether protocol second digits conform to Benford's logarithmic distribution. Fabricated tally sheets exhibit pronounced statistical deviations.

Precinct Risk Screening

Precision ranking of precincts vulnerable to controlled voting. Instantly isolates precincts exhibiting abnormal turnout surges exceeding 90%.

Institutional Cross-Check

Cross-checks elected MPs and municipal councillors from CEC protocols against incoming mandatory asset filings in anti-corruption registries.

17. AI Research Assistant ("Ask Naiasno") & Global Uniqueness

"Ask Naiasno" is a conversational AI research agent purpose-built for investigative journalism, powered by **over 220 specialized analytical tools**. Unlike general-purpose language models that hallucinate facts and miscalculate figures, our assistant executes direct, mathematically verified queries against official public databases. It delivers 100% auditable responses with exact numbers, dates, and primary source links.

What Questions Does It Answer in Seconds?

- "Which companies owned by GERB MPs won procurement contracts over €500K in 2024?"
- "Which hospitals in Plovdiv receive the highest NHIF reimbursements for oncology medications?"
- "Are there polling stations in Haskovo where 100 paper votes were tallied for DPS, but zero on the machine?"
- "How much total grant funding did Mediapool's foundation receive from America for Bulgaria?"

How Is Naiasno Unique in Bulgaria and Globally?

DIMENSION	TRADITIONAL MEDIA / REGISTRIES / GROUND NEWS	NAIASNO (NAIASNO.BG)
Registry Integration	Fragmented databases (CAIS, PPO, UMIS, TR, CAC). Each queried in isolation.	Unified Intelligence Architecture: 9+ registries (CAIS, PPO, UMIS, Interreg, NGOs, TR, CAC, SFA) synthesized into unified profiles of persons, companies, NGOs, and municipalities.
Media Analysis Granularity	Outlet-wide static labeling (e.g. CNN is left, Fox is right). Blanket categorization.	Article-Level Empirical Analysis: Granular text evidence citations + algorithmic detection of AI-generated content.
Geopolitical Slant Spectrum	Standard Western Left–Right binary axis. Inadequate for Southeastern Europe.	East–West Geopolitical Axis: Rigorous classification of Pro-Russian vs. Euro-Atlantic framing + detection of coordinated Kremlin talking points.
Investigative AI Assistant	General conversational bots (ChatGPT/Claude) that hallucinate Bulgarian statutes and statistics.	Deterministic Analytical Agent: 220+ specialized tools executing queries strictly over primary government registries.
Budget Simulation & Prices	Stale official releases (NSI) lagged by months, lacking interactive modeling.	Live Interactive Simulators: Real-time Fiscal Tax Simulator + 100,000+ daily retail price monitoring.

How the Investigative AI Assistant Works

220+ Specialized Analytic Tools

The assistant does not synthesize speculative prose; it invokes strictly audited analytical routines directly against official government registries.

100% Fact Auditability

Every figure, commercial entity, and contract is rendered with direct hyperlinks to the underlying primary source in the corresponding state register.

Unrivaled Investigation Velocity

Complex research inquiries requiring days of manual spreadsheet audits and scanned PDF inspections are resolved comprehensively in 3 seconds.
